

Collision Roulette:

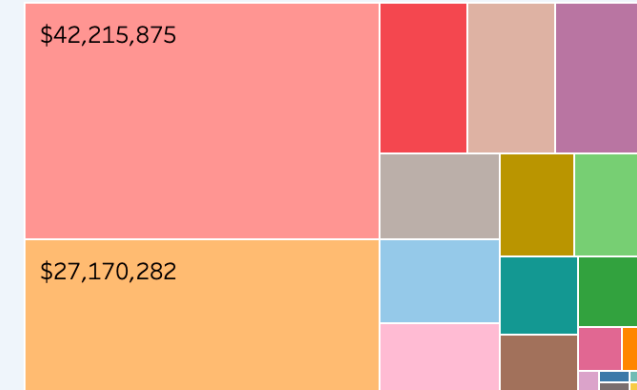

U.S. Wildlife-Aircraft Collisions: 2001 - 2015

Between 2001 and 2015, 28,000 wildlife-aircraft collisions occurred at U.S. airports. While 94.7% caused no financial damage, they often resulted in wildlife loss - mainly birds. The remaining **5.3% led to over \$320 million in damages**. Explore this dashboard to see which airports had the highest collision costs, most incidents, and greatest passenger traffic during this period.

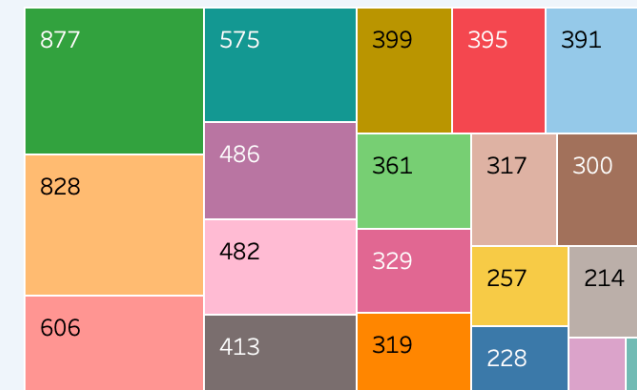

By collision: how much and what species?

By airport: how much?

By airport: how many collisions?
